

README

0. To run the program you have to download a version of JavaEditor or another coding program you know (this readme is only for JavaEditor!). Initialize the Java editor before you continue.
1. Open the “ChristmasTree_Application_home24.java” file with the JavaEditor.

2. In the top left corner you will see some buttons. There is also a green play button. Click it to run the program.

3. Clicking the green button will open a CMD window. Follow the instructions of the program.
4. If everything worked well, a Christmas tree should be displayed.

Enjoy the program :-)
